

License Verification Solution

Voice4net has created a cost-effective, fully automated service to accomplish this task. We call this product NURSEVOICE. The concept is very simple. Nurse employers in the field can help themselves by dialing a dedicated 800 toll-free number and touching a few buttons on their phone. The information is automatically delivered to them so they can complete their hiring decisions. Certifications, work experience, and claim information is quickly accessible anytime, anywhere from any touchtone telephone. We can even send a hard copy of the information to the requestor via fax. Also, for those employers that have web access, Voice4net can add a distinctive browser-based interface to the certification/licensing information. NURSEVOICE is the total solution for your verification requirements.

Voice4net has made it simple and fast for you to implement the technology with no software development or hardware support required. Voice4net takes on the complete responsibility of hosting the application, working with the telecom carriers, and supporting the hardware platform. This is a turnkey solution and requires little or no capital expense up front.

For those agencies that have significant technical capabilities in house we offer the opportunity to purchase the NURSEVOICE system. This allows the agency to purchase or lease the hardware, software, and telecommunication circuits needed to operate the system in their own facility and provide their own support. Voice4net supports your agency from start to finish during all phases of the system installation and implementation.

Either environment, hosted or in house, provides for an excellent self-service solution for your agency. The NURSEVOICE system provides a faster, more efficient response to the nursing employers in the field and significantly reduces the workload on your agency staff.

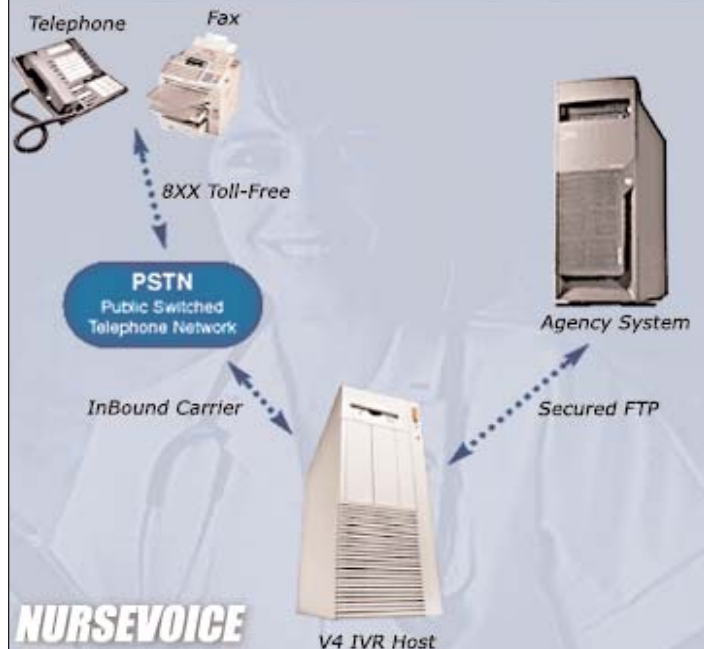

NURSEVOICE is the total solution for your license verification requirements. Please contact us with any additional questions and to schedule the implementation of your NURSEVOICE system.

NURSEVOICE

In today's fast-paced, "must know now" environment, government agencies need tools and technology that can accomplish quick and easy access to critical information while maintaining proper control of that information. The nurse certification/license verification process is no different.

Gone are the days of mail-in requests or call center verification. Agencies have enough on their plate with increased responsibilities and budget cuts. They need to implement self-service solutions so that response to information requests can be fulfilled immediately and accurately.

NURSEVOICE is the total solution for your license verification requirements.
