

Complete Web Interface

Multimedia Inbox shows voice / fax files. Descriptions and folder archive may be manipulated.

Automatic notification via email, phone or pager is available for all message formats.

Personal and group calendars are tightly integrated and easy to maintain.

Unified Messaging

In the summer of 2000 we developed a highly sophisticated yet easy to use voice messaging system that could be used in a service bureau environment. This system will scale to more than 100,000 users and has a very complete web interface. Voice mail, fax, conferencing, follow-me and broadcast messaging are just a few of the hundreds of features that this system has to offer.

Because of the extensive work done with each of these products and services we have created our own tools and capabilities that give us a competitive advantage when creating new solutions. In many cases we deliver product within a few days. And larger projects can be delivered with a few weeks. When utilizing the V4 Hosted IVR Network our clients take advantage of very low up front costs, no capital expense, extremely affordable monthly services fees and included 24/7 support. In almost every case we are able to show a reduction in cost over in house based systems. Also, we usually out-perform and under bid our competition.

www.voicemailzone.com

-  Single number for voice/fax
-  Outbound calling capability
-  Multiple greetings & personalization
-  Follow Me roaming
-  On demand conferencing (multi-way)
-  Audio on demand
-  Fax on demand
-  Web out interface with streaming
